4. Evaluation.

SG1A

5. Search evaluation.

NOTE: "BB" is vessel

SG1A

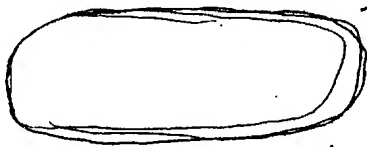

Vessel "BB" seems to be a medium-sized metal cargo vessel, somewhat <sup>raised</sup> ~~relatively~~ slow. White trim forward ~~lower~~ <sup>lower</sup> portion. Superstructure aft. Rust streaked. Funnel seems to be orangish-red. Vessel smokes alot. There's a lime-green color apparently associated (neither hull or superstructure) - superstructure primarily off white - some black details dark-colored hull. Impression of things stacked forward of superstructure.

Contraband is located in a closed, stuffy, metal-walled space and is packed in brown, card-board-like containers with plastic sheeting inside wrapping contents, which are white, granular-like tide that has been wet + dried - lumpy. Hard. It's located forward of superstructure just aft of midships slightly below deck line, but above waterline slightly.

This Following Refers to Vessel

16 JUL 90

See sketch of vessel (p. 10a) and location of contraband aboard vessel (p. 10b).

Contraband is contained within a black object \* that is glossy, (like black enamel paint) within metal walls, & contains component parts. ~~Other~~ Remaining space inside allows storage of many small transparent vials which contain some sort of liquid and are sealed by rubber like stoppers or lids.

Black object seems to be more a part of the vessel, or belonging to the vessel rather than being any sort of cargo. But it is not necessarily permanently affixed.
